

CRAFT — Website Structure

Public route tree. Nav dropdowns expand Programs and Fleet; the footer set is reachable from every page.

IN THE FOOTER, ON EVERY PAGE

Endpoints and files no visitor sees: form intake, the agent API, and the discovery surfaces.

FORM INTAKE

Each site form POSTs to its own route; all four send mail via Resend and need RESEND_API_KEY set.

- /api/charter-request**
from /charter
- /api/contact**
from /contact
- /api/corporate-program**
from /programs/corporate
- /api/management-inquiry**
from /programs/management

STATE AT TIME OF EXPORT

- Hosted on Vercel at craft-website-tau.vercel.app.
- flycraft.com still serves the previous site and is not connected.
- SITE_PUBLIC is unset, so the site sends noindex and robots.txt disallows all.
- RESEND_API_KEY is unset — forms report success but deliver nothing.

AGENT API

A documented JSON path so an AI agent can price and request a trip without driving the booking form.

- /api/agent**
Capability manifest
- /api/agent/airports**
Resolve a place name to airport codes
- /api/agent/quote**
Price + file a request

DISCOVERY SURFACES

How crawlers and assistants find and understand the site. JSON-LD is embedded in every page's HTML.

- /sitemap.xml**
20 routes
- /robots.txt**
AI crawlers named
- /llms.txt**
Site summary
